

Extentia embeds SAP solutions and platforms in its applications

By VARINDIA 2018-10-13

Extentia is proud
to be an **SAP** partner!

Extentia will now directly embed SAP solutions and platforms into their applications. This development follows the Pune HQ Indo-German IT company joining the SAP OEM PartnerEdge Program.

Extentia can now empower its customers and partners with access to SAP analytics, mobile, cloud, flexible licensing, co-development with SAP's product management team, and future roadmap insights, among others.

The program will provide the company with access to services and resources from SAP that will accelerate time to market and result in the successful and efficient integration of SAP solutions. In addition to this, partners can also have access to world-class tools and resources resulting in an improved

technical, sales, and marketing perspective.

Umeed Kothavala, CEO, Extentia, says, "As a SAP partner since 2010, Extentia has a wide portfolio of tools and services to deliver value to clients. We have worked with SAP to create robust solutions over the years, with a focus on key technology areas such as mobile, cloud, and design. We're delighted and proud to be part of the PartnerEdge program, and look forward to a continued long and fruitful partnership with SAP."

Extentia has inaugurated a development centre in Whitefield, Bengaluru, India. The company's teams have worked closely with SAP for over eight years.
